Why CardScan for Mac? Click here to find out.

CardScan® Executive for Mac®

## Features

Accurately scan and read business cards

- Most accurate leading business card scanner\*
- Proprietary interpretive technology designed to read the nuances of contact information to assign the correct fields into the database
- Color scanner scans up to 20 cards per minute
- USB-powered, no additional power required

- Elegant, slim design sits unobtrusively on the desk, small enough to pack for travel
  - Cards are automatically rotated to the proper orientation
  - Card images are saved and stored to view in “Image view”
  - Card backs can also be scanned if desired
  - Batch scan, and assign common information, such as a category or note, to the batch
- Consolidate contacts from many sources
- Drag-and-drop from: email signatures, web pages and other electronic files
  - CardScan® software interprets data and places in correct fields – no line-by-line cut and paste, no manual field matching
  - Import vCards and add contacts manually, or add notes to existing contacts at any time
- Software features to organize contacts
- Assign one or more categories to contacts in order to create groups and lists
  - Create custom categories and sort by categories
  - Search, sort alphabetically
  - Add notes, time and date stamps
  - Automatically synchronize to Address Book (then to iPhone, iPod or MobileMe)
  - Share selected contacts with Address Book or export vCards to other software such as Entourage
  - Map contact addresses, visit web sites or email from CardScan® in one step
  - Use the print wizard to print to envelopes, labels, lists and other ready-to-use templates
